ABOUT ME

Embedded System Specialist with established experience in the Industrial Automation, and Healthcare industries.

Skilled in PCB Designing, Microcontrollers, Electrical CAD, Electrical Panels, Design Review alongside Linux System Administration, DevOps and Networking.

This CV summarizes my seven years of practical experience in software, hardware, and IoT solution development for academic and commercial applications. For more information, please visit [my personal website](#).

If you are looking for a dedicated Embedded System Developer with a great technical background, exceptional problem-solving skills and a collaborative mindset, please don't hesitate to connect with me.

WORK EXPERIENCE

Embedded System Design Specialist

Feb 2021 - Present

C1Tech Group

- Product Manager
- Design, Development, and Implementation of the Operating Room electrical systems.
- Executive of numerous project in various locations across the country

Hardware Development Manager

Jun 2019 - Present

FUMP-ICT

- Shareholder and Vice Chairman
- Affiliated with Ferdowsi University of Mashhad Pishgaman Holding
- Launched Mashhad Dev Center Office with lead Director and recruited and managed new team of 8 employees.

Product Manager & DevOps Engineer

Apr 2020 - Feb 2021

Department of Education (Khorasan Razavi, Iran)

- This platform is made up of virtual classes (online room), lectures management (for assignments, surveys, and examinations), and school management (management of users, lectures, and classes) and more

Embedded System Developer

Jan 2016 - Dec 2020

Ferdowsi University of Mashhad

- Incorporating student initiatives and various projects in university labs as part-time work.
- Described in EDUCATIONAL EXPERIENCE section.

Lecturer & Teaching Assistant

Sep 2017 - May 2020

Ferdowsi University of Mashhad

Lecturer of Internet of Things Basics Course (with [Dr.Sedaghat](#))

Teaching Assistant of Computer Foundation and Programming ([Dr.Asadi](#)), Computer Networking ([Dr.Mohajerzadeh](#)), Network Security ([Dr.Ghaemi](#)), and Wireless Networks ([Dr.Hosseini](#))

- Designing projects and assignments for students
- Providing support for helping students in their issues
- Scoring and marking assignments

Internship - ICT Network Technician

Jun 2018 - Aug 2018

HiWeb (Vodafone Iran Partner)

- 3G/4G network driver test using TEMS™ Network Testing Portfolio
- Network monitoring using Zabbix
- Several tasks of passive network engineer
- Worked with Mikrotik RouterOS

Educations

• Master of Science, 2021 - Present

IAUM, Computer Networks

GPA: 19.36/20

Master's thesis:

Design & Evaluation of a Tightly Coupled UWB/INS/GIS Indoor Positioning System Applying Machine Learning Methods in CloudIoT.

• Bachelor of Science, 2015 - 2020

FUM, Computer System Architecture

GPA: 16.39/20

Bachelor's project:

Development of Cryptocurrency Mining Rig Energy Monitoring System.

• Diploma, 2011 - 2014

ATM, Mathematics and Physics

GPA: 19.76/20

Skills

Operating Systems

Linux & Distro's, YOCTO, Buildroot, EDK2

Programming Languages

C/C++, C#, Python, and Bash

Printed Circuit Board (PCB)

Experienced in Altium Designer
Expert in PCBA (SMD, DIP) & Debugging

MCU and SBC

STM32 and ESP32 MCUs, NVIDIA Jetson, Raspberry Pi, and Beagle Bone SBCs

Wireless Communications

Wi-Fi, Bluetooth, Zigbee, UWB, LoRaWAN, and Mesh Networking

Wired Communications

Ethernet, USB, UART, SPI, I²C, I²S, ...
RS232, RS485, KNX, CAN, Modbus, ...

DevOps and SRE

Experienced in Git, CI/CD, Containers and Orchestration (Docker), HTTP Servers (Traefik, Nginx), Automation tools, Metrics, Tracing (Grafana, Prometheus), and Logging Systems

EDUCATIONAL EXPERIENCE

Embedded System Developer - Development of Cryptocurrency Mining Rig Energy Monitoring System Jan 2020 - Dec 2020

FUM IP-PBX Lab

This system comprises a tangible tool to gauge electric energy usage factors and a smartphone software that shows data and statistics of energy consumption during cryptocurrency mining. Another version of this system is created to control home appliances' usage using the Wi-Fi mesh network.

Embedded System Developer - Operating Room UVC Disinfection System May 2020 - Apr 2020

FUM Robotics Lab

This automaton was created to clean hospital areas using high strength 360 Degree UVC lights. The robot's microprocessor, determines the duration of the UVC radiation based on the size of the room.

Designing and Optimizing of Campus LoRaWAN & Wi-Fi Networks Jun 2019 - Feb 2020

FUM Information & Communication Technology Center (ICT)

FUM ICT Center launched this initiative as an encounter with the numerous issues with the high-density Wi-Fi network that have been observed, including network bandwidth issues, signal collection, and lack of coverage.

The main actions of this project included full execution of the construction plan, relocation of access points, appropriate modification of network settings, and active and inactive tracking.

Executive Committee of the 16th International ISC Aug 2019 - Aug 2019

Ferdowsi University of Mashhad

- Information Security and Cryptology Conference
- Speaker at Information Security and Cryptology Village

Lead Project Manager - IoT Hotel Management System Jun 2017 - Jul 2019

Ashian Startup - Co-Founder

This startup's major objectives are a fully IoT-based hotel administration system and improved accommodations for its visitors.

Multiple screens have been placed for this device both inside and outside the guest room.

Guests can submit requests to the hotel desk, order goods, request for cleaning, lights controlling, and more using the interior panels as a tiny process.

Also the hotels staffs jobs are monitored and recorded for a better working environment.

Embedded System Developer - IoT Gateway Jan 2019 - May 2019

FUM IoT Lab

Gateways are one of the crucial components needed for the Internet of Things.

Gateway is a device that allows for a variety of interactions between the nodes and the server. Users, preferences, network nodes, and ultimately data transmitted in networks are all managed on the device's control page.

- Specs: STM32F7 Core, RTC, SD Card, USB, 2G, LoRa, Zigbee, Ethernet, Wi-Fi, CAN, nRF (C++)

Embedded System Developer - IoT Call and SMS module Oct 2018 - Feb 2019

IoT based Call and SMS module

This device attempts to call a phone number in addition to sending individual or group text messages.

The system has two hardware circuits, a website, and supports Wi-Fi. It has a message planner and can handle user contacts and save them to the internal flash memory.

Application Developer - Monitoring of Burnt Chandelier Lights Jan 2016 - May 2017

FUM Pattern Recognition Lab

The goal of this endeavor is to locate any burnt out lights inside the fixtures.

The foundation of this system is to measure the total current usage and transmit that information to the operator's wristwatch. The watch collects data and enters it on the website.

Languages

English

Working proficiency

Persian

Native

Certifications

- Building Automation using KNX Protocol - Feb 2018 from "Iran Technical & Vocational Training"
- PCB Designing - Dec 2017 from "College of Ferdowsi University of Mashhad"
- GNU/Linux Foundation - Apr 2017 from "FUM LUG Association"

Strengths

- Excellent leadership, communication and time management abilities
- Strong cooperation and partnership skills in job environment
- Outstanding planning and multi-tasking abilities
- Proven ability to work creatively along with problem-solving skills
- Talented to acquire new skills and develop team members
- Adaptable, diligent and capable of working autonomously when necessary
- Remarkable to make choices in difficult situations
